Anchor Bloc has been designed to provide the ultimate solution in flexibility when being incorporated into your design or project - take a look at some of our examples below...

Ratchet Straps

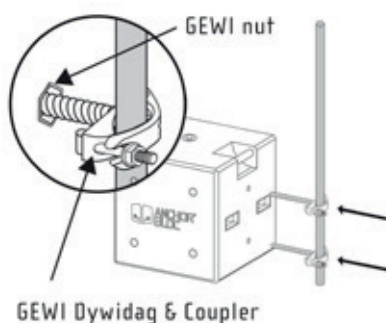

Ratchet straps can be connected to the Anchor Bloc via the top scaffold tubes to secure marquees, gazebos, or to ballast any temporary structure.

Direct to Scaffold

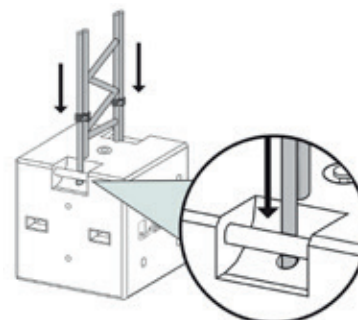

Scaffold tubes can be attached direct via a right-handed coupler to the top scaffold tubes. These can be rotated through a variety of angles to brace other scaffolding or fencing as shown above.

GEWI® Dywidag & Coupler

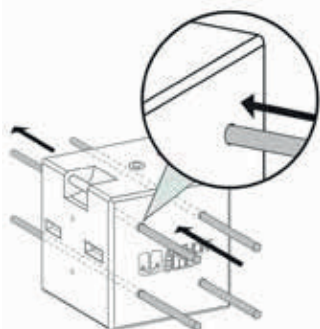

Scaffold can be securely attached at 90° vertically, via GEWI Dywidag thread bar and scaffold half-coupler screwed direct into GEWI nuts.

Vertical Scaffold Tubes

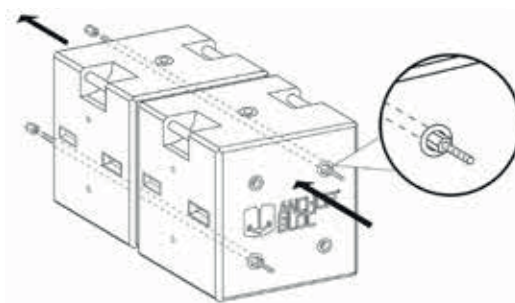

Scaffold tubes can be placed directly into the vertical tube inserts (x2) instantly providing a secure base for aluminium beam structures, for example height barrier or lighting truss rig.

Horizontal Scaffold Tubes

Scaffold tubes can be placed directly into the horizontal tube inserts (x4). These can then be used with additional scaffold fittings to allow further methods of bracing and support to a structure.

Connector Bars

Using the scaffold tube inserts, multiple Anchor Blocs of all sizes can be connected together using our connector bar's and couplers.
